

## **INTERIM SEWAGE LAGOON REPAIRS**

**In 2004, Concentric was commissioned to design interim, mitigative measures to address leakage associated with the existing three-cell sewage lagoon.**

**The repair was mandated by an order issued by Environment Canada.**

**Concentric worked closely with Government officials and the municipality to develop repair strategies that would meet the intent of the Environment Canada directive.**

**The owner extended our commission to include the administration and construction supervision portion of the project.**

**Concentric monitored the contractor's day-to-day performance and provided on-site guidance and instruction.**

**Concentric completed a topographic as-built survey of the lagoons that detailed all of the areas that were repaired.**

**All of the issues identified in the Environment Canada directive were satisfied and the lagoon was brought back into compliance.**
