

## **FREEZER BUILDING ADDITION**

**In the spring of 2006, Concentric was retained as Prime Consultant and a Structural Designer for a 60,000 square foot freezer addition to an existing vegetable processing plant.**

**The tight timelines and logistical challenges were well suited to a design-build process.**

**Working closely with the contractor, Concentric prepared structural and architectural construction drawings suitable for permit purposes.**

**Construction began in the summer of 2006, with Concentric providing construction review services until project completion in the fall of 2006.**
