

## **PARKS BUILDING ASBESTOS REMEDIATION**

**In the spring of 2004, it was reported by Parks building employees that asbestos containing materials (ACM) may be present within the facility.**

**Concentric was retained to complete an asbestos survey to verify the presence or absence of ACM, and if present, document the location and condition of asbestos within the building.**

**By completing the survey, the owner was able to make informed decisions pertaining to the management of asbestos that existed within the building.**

**Based on the results of the survey, Concentric made recommendations pertaining to risk management and the implementation of an Asbestos Abatement Program and Asbestos Management Plan.**

**Concentric provided oversight and air monitoring services during the abatement.**

**The abatement was completed in late 2004.**
